Product Description

This is hotel quality hand towel.It is a high-quality product that combines softness, comfort, high water absorption, and durability. Whether it's hotel rooms, SPA clubs, or high-end dining venues, this hand towel can be worn by your customers.This towel is made of long staple cotton as the raw material, with detailed fibers and better texture. In addition, it is processed by advanced machines and professional workers to remove short fibers and impurities from the cotton, giving the entire towel a better softness and fluffiness. The surface of the handkerchief is guaranteed to be smooth, with a more skin friendly touch, and it can maintain the same texture as new even after multiple washes. This towel adopts special textile technology, greatly increasing the porosity of the towel, making it highly absorbent. Greatly improves the ability to quickly dilute water after wiping hands, reduces the possibility of bacterial growth, and is more environmentally friendly and hygienic. Its rough edges have undergone double needle sewing technology, with up to 5000 stitches, ensuring that the edges do not pill or come loose. More importantly, this towel can still maintain its original appearance after high-temperature disinfection and multiple washes, and is not so prone to yellowing and aging. In addition, the weight of this towel can reach up to 600 grams per square meter. It is a towel that fully meets the standards of a five-star hotel and is also the best choice for many beauty salons, spa centers, and other places.

1

Selected high-quality

PRODUCTION PROCESS

Feature:

1. Adopting environmentally friendly active printing and dyeing: All colors are made with environmentally friendly reactive dyes that will not fade, and strict quality inspection is ensured. All indicators fully comply with international safety standards for use.
2. Double needle double line edging: The towel is sewn with a sturdy double needle technique on all four sides, and is internally locked without curling, unraveling, or tearing. Reduced the cost of use.
3. Thick and flexible, long-lasting without deformation: Strictly control the weight (commonly 500-550g/m²) and yarn count density of towels to ensure that they remain soft and supple even after long-term use.
